
Twisted Extension PursuedPyBear

Apr 20, 2020

Contents

Integrate PursuedPyBear with the Twisted event loop.

This module allows running the PursuedPyBear main loop inside of the Twisted loop.

In order to integrate with a foreign event loop it is possible to use Twisted's native foreign event loop integration.

For example, to integrate with `asyncio`, the following needs to be done before importing `twisted.internet.reactor`:

```
import asyncio
from twisted.internet import asyncioreactor
asyncioreactor.install(asyncio.get_event_loop())
```
